

Glass Protection & Restoration Services

Brought to You By

The Old Tiffany Building, 15 Union Square, New York

On-Site Glass Protection & Restoration Services

DFI's On-Site Glass Protection & Restoration Services are designed to restore damaged glass, protect it from future degradation and make it better than new for years to come.

- ✓ Glass can become **damaged over time** due to hard water, concrete leaching, scratching, acid rain and many other environmental elements.
- ✓ Treating the glass with Diamon-Fusion® coating ensures longevity and **reduces maintenance costs** and frequency of cleaning
- ✓ **Enhances the appearance** of the building, giving building owners an advantage in the highly-competitive commercial real estate leasing environment, where vacancy rates are at all-time highs.
- ✓ Restoring glass is much more **cost-effective** than replacing damaged glass

DFI is a proud member of AIA and USGBC

\$24B Apparel Manufacturer World Headquarters *Restoration Project*

Before

After

- ✓ After nearly two decades, the exterior glass at the world headquarters of a \$24B apparel manufacturer in Oregon became extremely damaged due to concrete leaching and inclement weather.
- ✓ After several failed attempts to fix the glass with various vendors, DFI was hired to restore the damaged glass, in lieu of an extremely costly replacement.
- ✓ DFI restored the glass with DFI Restoration Products, adding the award-winning Diamon-Fusion protective coating for future coverage.
- ✓ The client contracted with DFI to perform restoration services on several other buildings through the campus and off-site jet hanger.
- ✓ For over five years, DFI has treated over 50,000 square feet to date.

Tiffany Building, Manhattan, NYC

Glass Protection Project

- ✓ Brack Capital Real Estate invested in replacement glass for its famous building and found they were in desperate need of DFI's high-quality coating to protect and visually enhance the location.
- ✓ DFI professionals applied the award-winning Diamon-Fusion coating to the intricate glass design features within the exterior structure.
- ✓ The client was so impressed with the outcome, additional work was requested outside the original scope of the bid, including a large skylight and granite exterior building skirt.
- ✓ The windows have not required cleaning for more than two years, post application.

What People Are Saying...

The Cube at Claremont McKenna College

"I am very impressed with DFI and looking to incorporate more Diamon-Fusion® coating projects across the campus... I have cut my window cleaning by 50% and saved \$12,000-\$14,000 per year since Diamon-Fusion® was applied to our windows."

– **Brian Worley**, Director of Facilities & Campus Services at Claremont McKenna College

"The Academy's experience with DFI has been very positive. The end product is everything I was told it would be resulting in lower labor and material costs. In fact, the custodial staff commented 'I don't know what you did to the glass but we like it!'"

– **Jock Young**, CAS Facilities Manager

"I was impressed with DFI's ability to restore several high-profile windows at the West Marine HQ, which had been badly water-damaged from concrete leaching. After they treated the glass with Diamon-Fusion®, the windows looked good as new and are now very easy to clean."

– **Erick Taylor**, West Marine Management Supervisor

"I loved the way Diamon-Fusion® performed on the windows, showers, and tile and granite at my home so much, that I had DFI apply it to the windows of my dealership and my courtesy shuttle vehicles."

– **Steve John**, *Tournament Director of the AT&T Pebble Beach National Pro-Am and (Previous) Owner of Ocean Honda*
