

# BENEFITS OF A DIAMON-FUSION® TREATED HOME

## REDUCES CLEANING TIME

1

Similar to a non-stick cooking pan, shower glass treated with Diamon-Fusion easy-to-clean coating forms an ultra-thin, protective barrier that repels both water and oil contaminants from sticking to the glass.

- Cuts cleaning time up to 90%
- Reduces mold and bacteria buildup
- Stays cleaner for longer in between cleanings
- No special cleaning products required

## PROTECTS INVESTMENT

2

Prevent staining, corrosion and grime on your glass and glass-like surfaces.

Over time, hard water stains can destroy the beauty of glass, granite, tile, porcelain, many other materials in your home by leaching minerals onto these surfaces resulting in permanent damage. If that surface is treated with Diamon-Fusion upon installation (or soon after), this damage can be prevented.

## LONGER-LASTING BEAUTY

3

Diamon-Fusion transforms ordinary glass into a high performing hydrophobic surface.

- Hydrophobic and oleophobic
- Improved brilliance and 100% optically clear
- UV resistant (won't break down in sunlight)
- Ultra-thin barrier provides permanent protection

## ENVIRONMENTALLY FRIENDLY

4

Eliminate the need for harsh chemical cleaners – creating a better environment.

Diamon-Fusion promotes a healthier more hygienic environment by eliminating the need for harsh cleaners. Cleanup can be done in seconds with just water and a microfiber towel. A reduction in cleaning also means less water needs to be used to maintain your glass and glass-like surfaces.

## WHY DIAMON-FUSION?

Keeping your shower enclosures, granite countertops, windows, sinks, toilets and other surfaces around your home in pristine condition usually means spending time and money. Now you can let Diamon-Fusion easy-to-clean coating put an end to all that hard work, while simultaneously promoting a more hygienic environment.

Diamon-Fusion's patented technology makes surfaces easier to clean by making them more water and oil repellent. The less water and oils stick to the surface, the less they can deposit their contents such as hard water stains, soapscum, and other contaminants onto your surfaces.

*Protect your investment with DFI's patented coatings for your home.*
